

ENVIRONMENTAL CHARTER

DOpla S.p.A. Management believes that the company's development must integrate the search for a better quality of life for customers, employees, shareholders, and the regions and various communities affected by production and distribution operations.

The company's commitment towards environmental protection is stated herewith:

- In addition to the most stringent compliance with environmental regulations respect all the rules and norms applicable
- Systematically control and reduce environmental impact at industrial and administrative sites and introduce best practices and procedures to detect, prevent and reduce all environmental risks
- In order to ensure a continued high level of environmental performance, DOpla S.p.A. improves all the aspects related to product life cycle, encouraging to apply all state of the art processes and technologies, that result in innovations and accept to exercise prudence and take precautions to ensure total safety for the consumers
- Raise awareness of all Group employees, promote education and training as top priorities
- Align best practices with those that offer the best level of environmental protection around the world and develop an active partnership with external groups and organizations in order to achieve the best environmental management and product development.

In compliance with D.Lgs. 231/2001 regulation, the new organizational model was implemented since 2012, implying risk assessment in order to better identify and manage environmental issues.

Activities including surveillance and control have been implemented concerning both the company and the suppliers.

In 2013 the project of energy consumption reduction saw the light of the day. Production facilities were provided with thermal insulated material and the site's heating is now managed entirely by an automatic regulation system.

Precise environmental objectives demonstrate the company's constant attention towards environmental issues and its commitment to a sustainable and responsible business.

In compliance with the policy stated in this environmental charter, the company will focus on sustainable objectives that will be formulated in accordance with scientific and technological development and that will be analysed in a reporting protocol, which is updated annually.

Results will be available for public consultation from the Environmental and Quality Department and communicated to all the stakeholders.
